SERRAPEPTASE
DIETARY SUPPLEMENT
FOR RESOLVING PAIN, INFLAMMATION, BIOFILM, FIBRIN, BLOOD CLOTS ANDATHEROSCLEROTIC PLAQUE

PRODUCT DESCRIPTION
Serrapeptase – Dietary Supplement is a strong proteolytic enzyme. The late Hans Nieper, MD, was a German physician that was well known for his use and study of proteolytic enzymes in the treatment of atherosclerosis. He called Serrapeptase the miracle enzyme after using ultrasound to measure its ability to effectively dissolve arterial plaque without harming healthy cells lining the arterial wall. One of the most significant features of Serrapeptase (Helianthus tuberosus) is that it does not harm any living cells or tissues in the human body; it only dissolves non-living tissue such as cysts, hard and soft arterial plaque, blood clots, etc. The primary purpose of Serrapeptase in a protocol for Lyme disease is to dissolve fibrin layers surrounding harmful microbes associated with Lyme disease such as Borrelia, Babesia, Bartonella and Ehrlichia. The fibrin layer covering these microbes causes them to be hidden from the immune system; once the fibrin is dissolved the immune system can more easily identify and eliminate the harmful microbes.

RESEARCH
A study was done to investigate the ability of serrapeptase to reduce postoperative swelling, pain and trismus after third molar surgery. Cheek thickness and maximum interincisal distance were measured using calipers. Pain intensity was assessed clinically using a numeric scale. There was a significant reduction in the extent of cheek swelling and pain intensity in the serrapeptase group. Al-Khateeb, TH, “Effect of the proteolytic enzyme serrapeptase on swelling, pain and trismus after surgical extraction of mandibular third molars.” Int J Oral Maxillofac Surg. 2008 Mar;37(3):264-8. doi: 10.1016/j.ijom.2007.11.011. Epub 2008 Feb 12.

Another study was done to assess the response of serratiopeptidase in patients with carpal tunnel syndrome (CTS). Serratiopeptidase therapy may prove to be a useful alternative mode of conservative treatment, based on sixty-five percent of cases showing significant clinical improvement, which was supported by significant improvement in electrophysiological parameters. Panagariya, A, “A preliminary trial of serratiopeptidase in patients with carpal tunnel syndrome.” J Assoc Physicians India. 1999 Dec;47(12):1170-2.

PATIENT REPORTS
“I’m confident these supplements healed my inflammation - my bloodwork proved it. A fantastic supplement for all kinds of inflammation.”
-S.S.

“My physician prescribed this product for my high blood fibrinogen, which placed me at high risk for a heart attack. This brought it into normal range quickly. It really worked.”
-C.S.

SUGGESTED DOSAGE
1-3 capsules with 8 oz. of water 1-3 times daily at least 30 min. before meals and several hours after food.

Various Reported Medicinal Properties of Serrapeptase:
- Antiarthritic
- Antibronchitic
- Anti-cardiovascular disease
- Anti-carpal tunnel syndrome
- Anti-diabetic
- Anti-hemicrania (Migraines)
- Boosts Immune System
- Antimicrobial
- Anti-osteoporotic
- Anti-sinusitic
- Anti-varicositic
